

TODAY'S STUDENTS,
TOMORROW'S
INNOVATORS.

AMGEN Biotech Experience

Scientific Discovery for the Classroom

In a typical year, ABE reaches approximately 90,000 students and 1,500 teachers. Globally, the program has impacted more than 1.1 million students to date.

We are excited to bring the Amgen Biotech Experience (ABE) to your child's classroom. ABE is an innovative science education program that introduces students to the excitement of scientific discovery. Through ABE, students learn about core technologies used by scientists in the discovery of human therapeutics, have the opportunity to use research-grade scientific equipment, and are provided with a rare glimpse into biotechnology and related careers.

This program is made possible by the Amgen Foundation which brings ABE to classrooms around the world. As the primary philanthropic vehicle of Amgen, a leading biotechnology company that discovers, develops, manufactures and delivers innovative medicines, the Amgen Foundation invests in the next generation of scientists and innovators. The students of today are the ones who will make tomorrow's groundbreaking discoveries.

We hope that by participating in ABE, your child is inspired to consider a higher education degree or career in science.

Your student will be participating in ABE on the following dates:

AMGEN
FOUNDATION
