SHORELINE COMMUNITY COLLEGE RECEIVES \$197,303 GRANT FROM AMGEN FOUNDATION TO ENGAGE STUDENTS IN SCIENTIFIC DISCOVERY

Amgen Biotech Experience Has Reached 15,000 Students in Pacific NW – Bringing Biotechnology to the Classroom

Shoreline, WA (Nov. 1, 2013) – Shoreline Community College has received a \$197,303 grant over the next two years from the Amgen Foundation to implement the Amgen Biotech Experience, an innovative science education program, in approximately 34 schools in Pacific Northwest. This program provides a real-world biotech lab experience to middle and high schools in Amgen's U.S. and United Kingdom (U.K.) communities.

"SCC is excited to continue bringing the Amgen Biotech Experience to classrooms in our community," said Adrienne Houck, Outreach Manager. "The students and teachers who participate in this program are given the tools and resources to bring science to life and inspire students to want to learn more about biotechnology."

Since 2008 in Shoreline Community College, the Amgen Biotech Experience (formerly known as the Amgen-Bruce Wallace Biotechnology Lab Program) has introduced more than 15,000 students in secondary school classrooms to contemporary science techniques, including comprehensive teacher training. Teachers are given a robust, hands-on, inquiry-based biology curriculum, in addition to a full suite of transportable, research-grade equipment and supplies, at no cost to the participating schools. Utilizing Nobel Prize-winning discoveries to prepare a recombinant DNA molecule which carries a gene for red fluorescent protein, students follow many of the steps biotechnology researchers use to produce medicines.

"The success of the Amgen Biotech Experience is due in large part to the grantees in our communities," said Jean Lim Terra, president of the Amgen Foundation. "The collaboration with undergraduate institutions and nonprofit organizations helps give students real-world, hands-on lab experience to introduce them to the excitement of biotechnology and scientific discovery."

Since the Amgen Biotech Experience was established in 1990, more than 300,000 students throughout the U.S. and U.K. have engaged in the program's molecular biology labs using relevant curricula, tools and techniques. In 2013, the Amgen Foundation will give more than \$2.5 million in grants to community colleges, universities and nonprofit organizations that lead and

support the Amgen Biotech Experience in different regions across the country where Amgen has a presence, bringing the total committed to nearly \$8 million.

Beginning this year, Education Development Center, Inc. (EDC) will apply its deep experience in designing and delivering high-quality science education programs to establishing a Program Office for the Amgen Biotech Experience. Working closely with existing sites, EDC will build on the assets of the program and implement strategies to enrich the program, including the introduction of a new strengthened curriculum for this school year.

“We know that students need access to hands-on, engaging science early and often. All students should get an opportunity to see how science plays an active role in their lives and their future. We thank the Amgen Foundation for providing scientific equipment and true science applications for our local science teachers and their students. We invite all life science middle school and biology, AP and biotechnology high school teachers to participate in this STEM opportunity. Biotechnology is STEM.” Adrienne Houck, ABE Outreach Manager in the Seattle and surrounding areas.

About Amgen Foundation

The Amgen Foundation seeks to advance science education; improve patient access to quality care; and strengthen the communities where Amgen staff members live and work. To date, the Foundation has donated over \$200 million in grants to nonprofit organizations throughout the United States, Puerto Rico and Europe that impact society in inspiring and innovative ways, and those that provide disaster relief efforts both domestically and internationally.
